# Correction

Diagram: A photon with energy  $E_{\text{photon}}$  strikes an electron at rest with mass  $m_e$  and velocity  $v$ . The electron recoils with velocity  $v$  and kinetic energy  $E_0$ . The photon's wavelength changes from  $\lambda_0$  to  $\lambda$ .

Given:  $\lambda_0 = 1.5 \cdot 10^{-7} \text{ m} (= 150 \text{ nm})$ ,  $\lambda = 2.67 \cdot 10^{-7} \text{ m} (= 267 \text{ nm})$ ,  $m_e = 9.1 \cdot 10^{-31} \text{ kg}$ .

Equations:

$$E_{\text{photon}} = E_0 + \frac{1}{2} m_e v^2$$

$$E_{\text{ph}} = h \cdot f = h \cdot \frac{c}{\lambda} = 6.63 \cdot 10^{-34} \cdot \frac{3 \cdot 10^8}{2.67 \cdot 10^{-7}} = 7.45 \cdot 10^{-19} \text{ J}$$

$$E_0 = h \cdot f_0 = h \cdot \frac{c}{\lambda_0} = 6.63 \cdot 10^{-34} \cdot \frac{3 \cdot 10^8}{1.5 \cdot 10^{-7}} = 1.326 \cdot 10^{-18} \text{ J}$$

$$\frac{1}{2} m_e v^2 = E_{\text{ph}} - E_0$$

$$v = \sqrt{\frac{2(E_{\text{ph}} - E_0)}{m_e}}$$

$$v = \sqrt{\frac{2(7.45 \cdot 10^{-19} - 1.326 \cdot 10^{-18})}{9.1 \cdot 10^{-31}}} = \sqrt{\frac{2(-5.81 \cdot 10^{-19})}{9.1 \cdot 10^{-31}}} = \sqrt{-1.28 \cdot 10^{12}} = 1.13 \cdot 10^{12} \text{ m/s}$$

# The End

Thank you for your attention!
